Vedant Vijay Shinde

(201) 668-7085 | Jersey City, NJ (Open to Relocation) | shindev124@gmail.com | Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Data Analyst with 2+ years of experience building Power BI dashboards, SQL analytics pipelines, and forecasting models that reduced reporting effort by 40–45% across transportation, e-commerce, and operations datasets. MS in Information Systems (GPA 3.94, Stevens Institute of Technology) authorized to work in the US on F-1 OPT with no sponsorship required.

EDUCATION

Master of Science in Information Systems *Sep 2024 – Expected May 2026*
Stevens Institute of Technology | Hoboken, NJ | GPA: 3.94 | ***Master's Scholarship*** | ***Beta Gamma Sigma Honor Society***

Bachelor of Engineering in Information Technology *Sep 2020 – May 2024*
University of Mumbai | Mumbai, MH, India

TECHNICAL SKILLS

Languages & Tools: Python (Pandas, NumPy, Scikit-learn), SQL (SQL Server), R, Excel (PivotTables, Forecasting), AWS, Git
Business Intelligence: Power BI (PL-300 Certified), Tableau, Dashboard Development, KPI Design, Data Visualization
Analytical Methods: RFM Segmentation, Cohort Analysis, A/B Testing, Regression Analysis, Supply-Demand Analysis

PROFESSIONAL EXPERIENCE

Stevens Institute of Technology | Hoboken, NJ
Research Assistant, Data Analytics *Nov 2025 – Apr 2026*

- Standardized and merged operational datasets from 12+ U.S. cities using Python (Pandas, NumPy, GeoPandas), reducing data inconsistencies by 20% and cutting processing time by 30%
- Quantified service equity gaps across 12+ U.S. cities by applying statistical distribution metrics across 5 operational dimensions, delivering findings that directly informed multi-city transportation investment recommendations
- Automated recurring reporting with reusable Python scripts and Power BI dashboards, reducing manual workload by 45% and streamlining stakeholder deliverables

Research Assistant, Data Analytics (Summer Fellow) *May 2025 – Jul 2025*

- Built a Python + AWS data pipeline consolidating 5M+ operational records from 8 transit systems into a centralized dataset, enabling the research team's first cross-regional performance benchmarking across 9 cities
- Performed demographic and operational analysis across 9 regions using SQL and Python, uncovering 3 key service coverage gaps that were cited in the research team's policy recommendation report to city-level transit agencies
- Developed Tableau dashboards visualizing the top 3 drivers of operational delays by geography, presented to stakeholders at 4 city-level agencies to guide resource allocation decisions

Terna Engineering College | Navi Mumbai, MH, India
Student Data Analyst *Feb 2023 – May 2024*

- Designed an inventory analytics pipeline querying 50,000+ rows in SQL and restructuring 3 years of procurement data with Pandas across 8+ categories, creating the first unified dataset and cutting data prep time by 35%
- Deployed a 4-dashboard Power BI suite covering inventory turnover, supplier lead times, and enrollment-driven demand — eliminated legacy Excel reporting and cut prep time by 40%
- Constructed a Python forecasting model using moving averages, exponential smoothing, and enrollment-driven calendar variables; validated against 3 prior years of data and reduced stockouts by 15% during peak periods

DATA ANALYTICS PROJECTS

Customer 360: RFM & Retention Analytics | GitHub *Feb 2026 – Apr 2026*

- Built an RFM segmentation engine in SQL (NTILE, LEAD, running SUM) across 1M+ transactions, scoring 5,878 customers into 9 segments — identifying 1,269 Champions driving 77% of revenue and 1,357 accounts showing churn signals
- Validated customer segments with chi-square ($p < 0.01$) and Cohen's d (> 0.8); cohort model revealed 61% first-purchase attrition, quantifying £2.07M at-risk revenue with £621K recoverable at 30% reactivation
- Delivered a 5-dashboard Power BI platform with 22+ DAX measures, row-level security, and What-If simulation; translated findings into a McKinsey-style case study with 3 prioritised recommendations and £673K–£795K in projected recoverable impact

AI Fashion Recommendation System | The Webster (Client Project) *Aug 2025 – Dec 2025*

- Led six analysts to build a Python-based recommendation engine processing 25,000+ product attributes for a luxury fashion retailer
- Cut manual validation effort by 30% with Excel-based quality frameworks flagging inconsistent metadata and incomplete records

CERTIFICATIONS

Microsoft Certified: Power BI Data Analyst Associate (PL-300) (Microsoft) | Google Data Analytics Specialization (Coursera)
