

Vedant Vijay Shinde

(201) 668-7085 | Jersey City, NJ (Open to Relocation) | shinde124@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Analyst with 2+ years of experience building Power BI dashboards, SQL analytics pipelines, and forecasting models that reduced reporting effort by 40–45% across transportation, e-commerce, and operations datasets. MS in Information Systems (GPA 3.94, Stevens Institute of Technology) authorized to work in the US on F-1 OPT with no sponsorship required.

EDUCATION

Master of Science in Information Systems

Sep 2024 – Expected May 2026

Stevens Institute of Technology | Hoboken, NJ | GPA: 3.94 | **Stevens Best 25 Under 25** | **Beta Gamma Sigma Honor Society**

Bachelor of Engineering in Information Technology

Sep 2020 – May 2024

University of Mumbai | Mumbai, MH, India | GPA: 3.44

TECHNICAL SKILLS

Languages & Tools: Python (Pandas, NumPy, Scikit-learn), SQL (SQL Server), R, Excel (PivotTables, Forecasting), AWS, Git

Business Intelligence: Power BI (PL-300 Certified), Tableau, Dashboard Development, KPI Design, Data Visualization

Analytical Methods: RFM Segmentation, Cohort Analysis, A/B Testing, Time-Series Forecasting, Regression Analysis

PROFESSIONAL EXPERIENCE

Stevens Institute of Technology | Hoboken, NJ

Research Assistant, Data Analytics

Nov 2025 – Apr 2026

- Architected a 9-module Python analytics pipeline consolidating real-time bike-share data across 7 U.S. city systems, reducing multi-day manual workflows to a single automated solution supporting a *Journal of Transport Geography* publication
- Quantified service equity gaps across 12+ U.S. cities by applying statistical distribution metrics across 5 operational dimensions, delivering findings that directly informed multi-city transportation investment recommendations
- Eliminated critical data gaps via automated location-matching and high-frequency usage inference, transforming 7 disconnected research notebooks into structured reusable Python modules that enabled rapid reuse across follow-on analyses

Research Assistant, Data Analytics (Summer Fellow)

May 2025 – Jul 2025

- Built a Python + AWS data pipeline consolidating millions of operational records from 8 systems into a centralized dataset for cross-regional benchmarking and trend analysis
- Identified critical service gaps across 9 regions by analyzing demographic and performance datasets, informing research on service distribution and operational equity
- Created Tableau dashboards isolating the top three drivers of operational delays by geography, supporting investment decisions across multiple city-level agencies

Terna Engineering College | Navi Mumbai, MH, India

Student Data Analyst

Feb 2023 – May 2024

- Designed an inventory analytics pipeline querying a 50,000+ row SQL database and restructuring 3 years of historical data with Pandas, consolidating procurement records across 8+ product categories into a single analysis-ready dataset
- Deployed a 4-dashboard Power BI suite covering inventory turnover, supplier lead times, and enrollment-driven demand — eliminated legacy Excel reporting and cut prep time by 40%
- Constructed a Python forecasting model using moving averages, exponential smoothing, and enrollment-driven calendar variables; backtested against 3 prior years of data, projecting a 15% stockout reduction during peak periods

DATA ANALYTICS PROJECTS

Customer 360: RFM & Retention Analytics | [GitHub](#)

Feb 2026 – Apr 2026

- Engineering a customer intelligence platform on 1M+ retail transactions using a Python cleaning pipeline and 8 SQL scripts covering RFM scoring (NTILE), cohort retention, churn detection, Pareto analysis, and market basket patterns
- Validated customer segments with chi-square and t-test analysis ($p < 0.01$), confirming Pareto concentration (18% of customers drive 79% of revenue) and isolating a first-purchase attrition cohort of 61% tied to £174K in modeled recoverable revenue
- Designing a 5-dashboard Power BI platform with 22+ DAX measures, row-level security, What-If reactivation simulation, and drill-through pages for executive stakeholder reporting

AI Fashion Recommendation System | The Webster (Client Project)

Aug 2025 – Dec 2025

- Led six analysts to build a Python-based recommendation engine processing 25,000+ product attributes for a luxury fashion retailer
- Cut manual validation effort by 30% with Excel-based quality frameworks flagging inconsistent metadata and incomplete records

CERTIFICATIONS

Microsoft Certified: Power BI Data Analyst Associate (PL-300) ([Microsoft](#)) | Google Data Analytics Specialization ([Coursera](#))
